AB Compds. derived such as S-[2-[(1-iminoethyl)amino]ethyl]-2-methyl-L-cysteine (I) zwitterion with 0-2 molar equivalents of hydrochloride are also disclosed. The chloride removal process was run in batch, but it could easily be run in a plant setting by recirculating the I dihydrochloride solution over an anion exchange resin column or an anion exchange membrane such as Amberlite 400. If the pH is inadvertently raised beyond the desired range, it may easily be adjusted back by adding an appropriate amount of HCl.
